The 5' ESTB were prepared from total human RNAB or polyA+ RNAB derived from 30 different tisques. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dr primed cDNA libraries. Such ESTB are not well suited for isolating cDNA primed cDNA libraries such 5' ends of mRNAB and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTB are derived from mRNAB with intact 5' ends and can therefore be used to obtain full length cDNAB and genomic DNAB: 5' ESTB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors

The invention relates to a novel polypeptide composition for preventing disease in an organism which comprises one or more types of polypeptide which have an alpha-helix structure and/or thionine component. The composition of the invention demostrates antibacterial and antifugal activities and may be useful for preventing a disease in an organism, for generating cultivated plants and in providing resistance to plant tissue against fungi such as Pyrtcularia oryzae (rice blast fungus), caratocystis fimbriata and bacteria such as Peseudomonas etc. The composition has high antimicrobial activity at low concentration. The current sequence is that of the rabbit CAP18 full-length protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antimicrobial polypeptide composition for a plant pathogen, comprises one or more types of thionine and/or a polypeptide having an alpha helix structure, as an active ingredient.
                                                                                                                                                                                                                       alpha-helix; thionine; antibacterial; antifungal; plant;

The present sequence represents a human cationic protein, having lipopolysaccharide binding and anticoagulant activity. The polypeptide idesignated CAPIS. Amino acids 134-170 of CAPIS represent a reactive nitrogen inhibitory protein (RNIP). The CAPIS polymclectide is useful for producing cationic proteins. The CAPIS polypeptide is useful for treating and diagnoshing lipopolysaccharide-associated conditions such as gram negative sepsis, and/or coagulation-related disorders, such as disseminated intravascular coagulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Vaccine, cathelicidin, antimicrobial, immunostimulant, immune response, antigen presenting cell, adjuvant, human, antibiotic, {\it FALL}-39.
                                                                                                                                                                                                                                                                                               Novel human cDNA encoding cationic proteins having lipopolysaccharide binding and anticoagulant activity, useful for treating and diagnosing gram negative sepsis and disseminated intravascular coagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           31 QVLSYKEAVLRAIDGINQRSSDANLYRLLDLDPRPTMDGDPDTPKPVSFTVKETVCPRTT

                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel cathelin-like prepro-FALL-39 (AAR92924) is the precursor of the antimicrobial, antibacterial agent FALL-39 (see AAR92923). It is the product of a cDNA clone (AAT18233) isolated from a human bone marrow cDNA library. FALL-39 includes a helical region (see AAR92922) that is required for biological activity. FALL-39 is useful therapeutically for inhibiting microbial growth in mammmals, including humans, and is non-

                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                 The invention relates to a vaccine comprising at least one antigen and at least one cathelicidin derived antimicrobial peptide or its derivative. The vaccine is useful for active immunication, especially of humans or animals without protection against the specific antigen. The cathelicidin derived antimicrobial peptide is useful in the preparation of an adjuvant for enhancing the immune response to at least one antigen, where the adjuvant enhances the uptake of at least one antigen, where the presenting cells (APC), and the adjuvant is added to the vaccine. Sequences ABB07701-07 represent cathelicicidin proteins form various

The invention describes new transplant compositions comprising antimicrobial polypeptides or pore forming agents and/or cell surface antimicrobial polypeptides or pore forming agents and/or cell surface receptor binding compounds. The media is capable of extending the preservation period past 72 hours and can provide organs with increased functionality upon transplant, animals receiving kidneys stored in the receiving kidneys stored in the creatinine levels of less than half of those observed in control animals receiving kidneys stored in UW solution (defined in the specification) alone. Lower serum creatinine levels are indicative of healthier kidneys alone. Lower serum creatinine levels are indicative of healthier kidneys and a more preferable prognosis for the transplant patient. The media of the incidence and/or severity of delayed graft function in patients receiving transplant of healthier conjans leads to a decrease in chronic rejection. This sequence represents an antimicrobial peptide studied in the development of the transplant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    31 QVLSYKEAVLRAIDGINQRSSDANLYRLLDLDPRPTWDGDPDTPKPVSFTVKETVCPRTT 90

The present invention is based on the finding that human antimicrobial peptide LL-37 ADF18218 is capable of inducing functionally important angle in cell culture and in vivo by activation of the receptor molecule FPRALI. LL-37 can be used in the preparation of a pharmaceutical composition for the prevention or treatment of a disease caused by, or resulting in, a reduced level of anglogenesis or arteriogenesis, or for the treatment of (infected) wounds or cancer. The disease may be associated with reduced blood flow, such as atherosclerosis, coronary heart disease, stroke, arterial occlusive disease or an ulcer.

The disease of anglogenesis through inhibition of IL-37 can be used to treat tumours, especially a carcinoma or sarcoma including cancer of the bile duct, brain, breast, colon, stomach, male and female reproductive corgans, lung and airways, skin, gallbladder, liver, nasopharynx, nerve cells, kidney, prostate, and Kaposi's sarcoma (all claimed). The present protein sequence is not explained in the specification.
9e of a peptide LL-37 for the preparation of a composition for
reventing or treating wounds or a disease caused reduced blood flow,
g. atherosclerosis, coronary heart disease, stroke, arterial occlusive

The results in a give expression signature of the mark, and using that gene expression signature to diagnature to the manual contains the authorization of a the gene expression of at least 60% of the genes comprises; a treatment of the gene signature. The invention of further comprises; a treatment of rheumatoid arthritis in a mammal of the mouse; diagnosis of rheumatoid arthritis in a mammal of the context than a mouse; diagnosis of rheumatoid arthritis in a mammal, and array or gene chip, specific for rheumatoid arthritis; screening the candidate drug in vitro for the treatment of collagentinduced arthritis; and reducing the symptoms associated with collagentinduced arthritis; and reducing the symptoms associated with collagentinduced arthritis. The compositions of the invention have the following artifocut, antifilammatory, dermatological, and immunomdulatory. The methods and compositions of the present invention are useful for theumatoid arthritis, lupus, ankylosing spondylitis, fibrositis, cheumatoid arthritis, lupus, ankylosing spondylitis, fibrositis, immune disease caused by an infectious agent. This sequence reparting to the genes used in the analysis and treating to the genes used in the analysis and treating to the genes used in the analysis and treating to the genes used in the analysis and treatment of autoimmune disease or arthritides. Not shown in the specification. It has been supplied in an electronic format from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ô
                                                                                                                      The invention relates to a novel method for diagnosing and analysing autoimmune disease or arthritides. The method comprises obtaining a patient sample containing mRNA, analysing gene expression using the mRNA that results in a gene expression signature of the mRNA, and using that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

```
The present invention relates to a Pep714-related peptide. This is useful for inhibiting microbial propagation, preferably viral propagation, and in the treatment of chemotherapy and radiotherapy induced oral mucoaltis, oral lesion, ventilator associated pneumonia, chronic respiratory infections and cystic fibrosis. The present sequence is a Pep714-related peptide precursor protein shown in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                         Novel Pep714-related polypeptide having biological activity, useful for treatment and prevention of microbial or viral infection, cystic fibrosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            90
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  infection, cathelicidin type peptide; LL-37; antimicrobial;

The present invention describes a method for determining the susceptibility of a subject to infection. The method comprises: (i) providing a sample from a subject; (ii) detecting any cathelicidin type providing a sample from a subject; (ii) detecting any cathelicidin type captibility of the sample; (iii) optionally comparing the susceptibility of the subject to infection (where no LL-37 or a low level of LL-37 indicates that subject is susceptible to infection; and (v) determining the susceptibility defining the subject is susceptible to infection. Also optionally administering an antimicrobial agent to reduce infection. Also corticosteroid or growth factor (preferably recombinant granulocyte colony stimulating factor (G-CSF) or GM-CSF). The product has attimicrobial, antilifanmatory and immunostimulant activities. The method can be used for determining the susceptibility of a subject to infection such as bacterial infection (e.g. Actinobacillus catinomycetemcomitans infection) and neutropenia, and for diagnosing neutropenia (e.g. Kostmann morbus). The method is also useful in the manufacture of a medicament in the form of toothpaste or mouthwash for the preventative treatment of infection e.g. gingivitis, oral infection (such as periodontitis), and for the areament of neutropenia. The method controls the normal flora in neutropenia and so combat infections. The present sequence represents the proform of human LL-37, which is used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

The invention relates to a novel method for evaluating cystic pulmonary fibrosis. The method comprises: measuring the quantity of cationic attimicrobial protein of 18 kps (CAP18) in the biological sample collected from the individual; comparing the quantity of CAP18 measured in the previous step and the quantity of CAP18 in a control sample; and contained results. The invention further comprises: a kit for carrying out the evaluating method, comprising a solid-phase component and an antibody coupled with an antigenic peptide having a sequence of ADR47312, or a colld-phase component comprising a solid-phase component comprising an solid-phase component comprising an immobilised antibody (first antibody) which is coupled with the antigenic peptide. The method or kit are antibody) coupled with the antigenic peptide. The method or kit are useful for evaluating cystic pulmonary fibrosis for the presence or absence of a risk of cystic pulmonary fibrosis, evaluation of serious or acute conditions, or the evaluation of the advanced grade of the disease. The method accurate evaluation of the acute or serious conditions, or the evaluation of the acute or serious conditions, or the cypie pulmonary diseases. This sequence represents the human condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              31 QVLSYKEAVLRAIDGINQRSSDANLYRLLDDDPRPTMDGDPDTPKPVSFTVKETVCFRTT 90

The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide perves as least 80% identical to the TAT nucleic acids and polypeptide polypeptides expression vectors and host cells compitating a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; fusion proteins comprising a TAT polypeptide; and methods and compositions for the treatment or aliagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, inverse system, melanoma and leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence represents a TAT polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9

The invention describes a polypeptide (I) of up to 50 amino acids where the polypeptide binds specifically to a chemerink polypeptide. Also described are: a mucleic acid sequence encoding (I); an expression vector comprising the coding sequence of the nucleic acid; a transgenic animal transferted with the expression vector; a (therapeutic) composition and isolated Chemerink polypeptide or a nucleic acid acquence of (I); an anibody that selectively binds to (I); identifying an agent that modulates the interaction between a Chemerin polypeptide and agent that modulates the interaction between a Chemerin polypeptide and agent that modulates the interaction between a Chemerink polypeptide; detecting the presence, in a sample, of an agent that modulates the interaction between a Chemerink polypeptide of the function of Chemerink polypeptide; detecting the presence, in a sample, of an agent that modulates the function of Chemerink polypeptide is detecting the presence, in a sample, of an agent that modulates the function of Chemerink polypeptide of a ganaling; a kit, for screening agents that modulates the function of Chemerink polypeptide of signaling; a kit, for screening agents that modulates the signaling activity of Chemerink polypeptide of control of the signaling activity of Chemerink polypeptide of signaling; a kit, for acreening agents that the signaling activity of chemering polypeptide of composition or activity of chemering polymeraced with a polymelectide encoding (I), an isolated polymelectide encoding (I), and its packaging creamedicanent for a vivo gene therapy or for in vivo gene therapy or a medicament for a vivo gene therapy or for in vivo gene therapy or a medicament for a vivo gene therapy or for in vivo gene therapy or gene therapy or gene therapy or a medicament for a vivo gene therapy or for in vivo gene therapy or gene therapy or gene polymerical cament as paraproclaments, purpura, sarcoldosis, Sezary Syndrome, Waldenstron's Macroglobulinemia, Gaucher's bisease, histlocytosis, and any other w
                                                                                                                                                            New Chemerin polypeptides, useful for diagnosing and treating a disease, e.g. neoplasms, hypergammaglobulinemia, paraproteinemias, purpura, sarcoidosis, Sezary Syndrome, Waldenstron's Macroglobulinemia, Gaucher's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

Antibacterial protein FALL-39 proternsor (FALL-39 peptide antibiotic)
(Cationic antimicrobial protein CAP-18) (rhCAP-18) (contains:
Antibacterial protein LL-37 (rhLL-37)].
Name-CAMP; Synonyms-CAP18, FALL39;
Macaca mulatta (Rhesus macaque).
Macaca mulatta (Rhesus macaque).
Macaca mulatta (Rhesus macaque).
Mammalia; Butheria; Buarchontoglires; Primates; Catarrhini;

-!- FUNCTION: Potent microbicidal activity, active against
Staphylococcus aureus and Escherichia coli (By similarity).
-!- SIMILARITY: Belongs to the cathelicidin family.
                                                                                                                                                                                                                                                                                                                                                                                                           ö

                            porcine leukocytes.";
FRBS Lett. 362-65-9(1995).
-!- FUNCTION: Exerts antimicrobial activity. It is more effective against Gram-negative bacteria than Gram-positive bacteria.
-!- SIMILARITY: Belongs to the cathelicidin family.
                                                                                                                                                                                                                                      HSSP, P32196, 1LXE.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

designated CAP18. Amino acide 134-170 of CAP18 represent a reactive nitrogen inhibitory protein (RNIP). The CAP18 polynucleotide is useful for producing cationic proteins. The CAP18 polypeptide is useful for treating and diagnosing lipopolysaccharide-associated conditions such gram negative sepsis, and/or coagulation-related disorders, such as disseminated intravascular coagulation

```

The present invention is based on the finding that human antimicrobial peptide Li-37 APS18218 is capable of inducing functionally important anglogenesis in cell culture and in vivo by activation of the receptor molecule FPRL1. LL-37 can be used in the preparation of a pharmaceutical

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a novel CAP18 (cationic antimicrobial protein of 18 kDa) antibody that can bind with human CAP18 peptide tragments AD129579-AD1229581. The antibody is useful in reagents and kits for the detection, diagnosis and monitoring bacterial pneumonia and other CAP18-related diseases like chronic and acute lung diseases, inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                LDPRPTMDGDPDTPKPVSFTVKETVCPRTTQQSPEDCDFKKDGLVKRCMGTVTLNQARGS 120
              resulting in, a reduced level of angiogenesis or arteriogenesis, or for the treatment of (infected) wounds or cancer. The disease may be associated with reduced blood flow, such as atherosclerosis, coronary heart disease, stroke, arterial occlusive disease or an ulcer. Suppression of angiogenesis through inhibition of IL-37 can be used to treat tumours, especially a carcinoma or sarcoma including cancer of the bile duct, brain, breast, colon, stomach, male and female reproductive organs, lung and airways, skin, gailbladder, liver, nasopharynx, nerve cells, kidney, prostate, and Kaposi's sarcoma (all claimed). The present

Novel Pep714-related polypeptide having biological activity, useful for treatment and prevention of microbial or viral infection, cystic fibrosis and chronic respiratory infections.
                                                                                                                                                                                                                    The present invention relates to a Pep714-related peptide. This is useful for inhibiting microbial propagation, preferably viral propagation, and in the treatment of chemotherapy and radiotherapy induced oral mucositis, oral lesion, ventilator associated pneumonia, chronic respiratory infections and cystic fibrosis. The present sequence is a Pep714-related peptide precursor protein shown in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Evaluating cystic pulmonary fibrosis, by measuring cationic antimicrobial protein of 18 kDa (CAP18) quantity in biological sample, and evaluating fibrosis by comparing measured quantity and quantity of CAP18 in control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       LDPRPTMDGDPDTPKPVSFTVKETVCPRTTQQSPEDCDFKKDGLVKRCMGTVTLNQARGS 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel method for evaluating cystic pulmonary fibrosis. The method comprises: measuring the quantity of cationic antimicrobial protein of 18 kbs (CAP18) in the biological sample collected from the individual; comparing the quantity of CAP18 measured in the previous step and the quantity of CAP18 in a control sample; and
